

Replicated & Offset Print vs Duplicated & Inkjet Coated Print

Duplicated - Inkjet Print

Replicated - Offset Print

The offset printed disc's have better color reproduction and have the reflective silver ring around the out side of the disc. The print is slightly more durable. Naturally water proof, fade resistant and glossy.

The inkjet printed discs are coated with a protective UV lacquer. This gives the usual print a long lasting finish, that is water resistant, fade resistant and glossy.

We also offer thermal printing. This is ideal if you want you information to be even longer lasting. The print on thermal printed disc is infused on to the discs surface and can never be removed. This application is suited to medical, education and other sectors who need this kind of print.

TIP: Always make sure your inkjet printed discs are coated. Or you will be left with a low quality product that smudges and has no gloss shine.
